DETAILED ACTION

Continued Examination Under 37 CFR 1.114

I. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(c), was filed in this application after allowance or after an Office action under *Ex Parte Quayle*, 25 USPQ 74, 453 O.G. 213 (Comm'r Pat. 1935). Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(c) has been timely paid, prosecution in this application has been reopened pursuant to 37 CFR 1.114. Applicant's submission filed on 10/28/2009 has been entered.

Information Disclosure Statement

II. The information disclosure statement (IDS) submitted on 10/28/2009 was filed after the mailing date of the Notice of Allowance on 08/24/2009. The submission is in compliance with the provisions of 37 CFR 1.97. Accordingly, the information disclosure statement is being considered by the examiner.

Allowable Subject Matter

III. The following is an examiner's statement of reasons for allowance:

Claim 1 recites a method for identifying transmitters in a wireless communication system with steps as defined in the specification (pages 5-26) including obtaining a plurality of received signals for a plurality of transmitters, wherein the plurality of received signals are received by a user terminal; and determining a transmitter for each received signal by determining a measured power for tile received signal, determining a list of a plurality of candidate transmitters for the

received signal, obtaining predicted power for each candidate transmitter in the list, and identifying the transmitter for the received signal based on predicted powers for the candidate transmitters and measured power for the received signal.

Applicant's independent claim 1 recites a particular combination of steps for identifying transmitters in a wireless communication system, which is neither taught nor suggested by the prior art.

Dependent claims 2-12 are allowable based on their dependence of independent claim 1.

Claim 13 recites a method for determining transmitters in a wireless communication system with steps as defined in the specification (pages 5-26) including obtaining a plurality of received signals for a plurality of transmitters, wherein the plurality of received signals are received by a user terminal; determining measured power for each of the plurality of received signals; and determining a transmitter for each received signal by determining a list of candidate transmitters for the received signal, determining an identified transmitter, determining measured power of the identified transmitter, obtaining predicted power for each candidate transmitter in the list, obtaining predicted power for the identified transmitter, determining the transmitter for the received signal based on predicted powers for the candidate transmitters, the predicted power for the identified transmitter, measured power of the received signal, and measured power for the identified, transmitter.

Applicant's independent claim 13 recites a particular combination of steps for determining transmitters in a wireless communication system, which is neither taught nor suggested by the prior art.

Dependent claims 14-18 are allowable based on their dependence of independent claim 13.

Claim 19 recites an apparatus for determining transmitters in a wireless communication system with a structure as defined in the specification (pages 5-26) including means for obtaining a plurality of received signals for a plurality of transmitters, wherein the plurality of received signals are received by a user terminal; means for determining a plurality of lists of candidate transmitters for the plurality of received signals, one candidate list for each received signal; means for obtaining predicted power for each candidate transmitter; means for determining a measured power for each of the plurality of received signals; and means for identifying the transmitter for each received signal based on measured power for the received signal and predicted powers for the candidate transmitters in the list determined for the received signal.

Applicant's independent claim 19 recites a particular combination of elements for identifying transmitters in a wireless communication system, which is neither taught nor suggested by the prior art.

Dependent claims 20-26 are allowable based on their dependence of independent claim 13.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
